SUBJECT INDEX

Ageing
The thermal characterization of multi-component systems by enthalpy relaxation 75
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Alkane
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351

Blend
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
The thermal characterization of multi-component systems by enthalpy relaxation 75
Binary system
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Butanol
Calorimetric analysis of liquid–liquid phase separation 1

Calorimetry
Calorimetric analysis of liquid–liquid phase separation 1
Structural recovery in isotropic and smectic glasses 99
The investigation of solution-crystallized polyethylene by slow calorimetry 257
Multifrequency calorimetry 309
Colloid
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
Compressibility
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Conductivity
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
Copolymer
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
The crystallization behavior of random copolymers of ethylene 155
Cross link
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
Crystallinity
The thermal characterization of multi-component systems by enthalpy relaxation 75
The melting of polymers — a three-phase approach 203
Dielectric relaxation as a probe of interphase structure 229
Pressure–volume–temperature studies of semi-crystalline polymers 397
Crystallite
The crystallization behavior of random copolymers of ethylene 155
Crystallization
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
The crystallization behavior of random copolymers of ethylene 155
Dielectric relaxation as a probe of interphase structure 229
The investigation of solution-crystallized polyethylene by slow calorimetry 257
Pressure–volume–temperature studies of semi-crystalline polymers 397

Deformation
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429
Dielectric relaxation
Dielectric relaxation as a probe of interphase structure 229

DFT
Modulated differential scanning calorimetry 295
DMA
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
DPPC
Multifrequency calorimetry 309
DSC
Calorimetric analysis of liquid–liquid phase separation 1
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
The thermal characterization of multicomponent systems by enthalpy relaxation 75
Structural recovery in isotropic and smectic glasses 99
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
The melting of polymers — a three-phase approach 203
The investigation of solution-crystallized polyethylene by slow calorimetry 257
Mathematical description of differential scanning calorimetry based on periodic temperature modulation 277
Modulated differential scanning calorimetry 295
Multifrequency calorimetry 309
Differential thermal analysis (DTA) and differential scanning calorimetry (DSC) at high pressures. Experimental techniques and selected results 321
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Dissolution
The investigation of solution-crystallized polyethylene by slow calorimetry 257
DTA
Differential thermal analysis (DTA) and differential scanning calorimetry (DSC) at high pressures. Experimental techniques and selected results 321
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337

Enthalpy relaxation
The thermal characterization of multicomponent systems by enthalpy relaxation 75
Epoxy
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
Ethylene
The crystallization behavior of random copolymers of ethylene 155
Eutectic
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Excess heat capacity
Multifrequency calorimetry 309

Glass
Structural recovery in isotropic and smectic glasses 99
Glass transition
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
The thermal characterization of multicomponent systems by enthalpy relaxation 75
Structural recovery in isotropic and smectic glasses 99
The melting of polymers — a three-phase approach 203
Modulated differential scanning calorimetry 295
Pressure–volume–temperature studies of semi-crystalline polymers 397
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417

HDPE
The melting of polymers — a three-phase approach 203
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Heat capacity
Mathematical description of differential scanning calorimetry based on periodic temperature modulation 277
Modulated differential scanning calorimetry 295

Heat of mixing
Calorimetric analysis of liquid–liquid phase separation 1
Heat of transition
Differential thermal analysis (DTA) and differential scanning calorimetry (DSC) at high pressures. Experimental techniques and selected results 321
HMDI
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
Homopolymer
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
History
Selected thermodynamic aspects of the influence of pressure on polymer systems 371

Interface
The melting of polymers—a three-phase approach 203
Interferometer
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429
IRS
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
Isobaric
Pressure–volume–temperature studies of semi-crystalline polymers 397
Isothermal
Pressure–volume–temperature studies of semi-crystalline polymers 397
Isotropic
Structural recovery in isotropic and smectic glasses 99

Kinetics
A description of melting and crystallization of eutectic oligomers and copolymers—an application of the physical concepts of colloids 113
The investigation of solution-crystallized polyethylene by slow calorimetry 257
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429

Laser
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429
LDPE
The melting of polymers—a three-phase approach 203
LLE
Calorimetric analysis of liquid–liquid phase separation 1
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
LLPS
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17

Matrix
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
MDSC
Mathematical description of differential scanning calorimetry based on periodic temperature modulation 277
Modulated differential scanning calorimetry 295
Melt
Pressure–volume–temperature studies of semi-crystalline polymers 397
Melting
A description of melting and crystallization of eutectic oligomers and copolymers—an application of the physical concepts of colloids 113
Modulated differential scanning calorimetry 295
Mesophase
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
Metastable melting
Modulated differential scanning calorimetry 295
Miscibility
Calorimetric analysis of liquid–liquid phase separation 1
Model
The melting of polymers—a three-phase approach 203
Mould
Pressure–volume–temperature studies of semi-crystalline polymers 397
Multifrequency calorimetry
Multifrequency calorimetry 309

Nicotine
Calorimetric analysis of liquid–liquid phase separation 1

NEW-TPI
Dielectric relaxation as a probe of interphase structure 229
Novel
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429
Oligomer
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
PDES
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
PDPS
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
PE
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
The investigation of solution-crystallized polyethylene by slow calorimetry 257
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
PEEK
Dielectric relaxation as a probe of interphase structure 229
PET
Modulated differential scanning calorimetry 295
Phase
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
The melting of polymers — a three-phase approach 203
Phase separation
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17
Phase transition
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
The investigation of solution-crystallized polyethylene by slow calorimetry 257
Differential thermal analysis (DTA) and differential scanning calorimetry (DSC) at high pressures. Experimental techniques and selected results 321
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Polymer
Calorimetric analysis of liquid–liquid phase separation 1
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
The thermal characterization of multicomponent systems by enthalpy relaxation 75
A description of melting and crystallization of eutectic oligomers and copolymers — an application of the physical concepts of colloids 113
The crystallization behavior of random copolymers of ethylene 155
The melting of polymers — a three-phase approach 203
Dielectric relaxation as a probe of interphase structure 229
The investigation of solution-crystallized polyethylene by slow calorimetry 257
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Pressure–volume–temperature studies of semi-crystalline polymers 397
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429
Porter parameter
High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Pressure
Differential thermal analysis (DTA) and differential scanning calorimetry (DSC) at high pressures. Experimental techniques and selected results 321
Influence of high pressure on the phase transitions in linear polysiloxanes as studied by high pressure DTA 337

High pressure DSC investigations on *n*-alkanes, *n*-alkane mixtures and polyethylene 351
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Pressure–volume–temperature studies of semi-crystalline polymers 397

Relaxation
The thermal characterization of multicomponent systems by enthalpy relaxation 75
Dielectric relaxation as a probe of interphase structure 229
New possibilities for the study of deformation kinetics and relaxations in polymers using a laser interferometer 429

SAXS
The melting of polymers—a three-phase approach 203
Selected thermodynamic aspects of the influence of pressure on polymer systems 371

Smectic
Structural recovery in isotropic and smectic glasses 99

Specific heat
Modulated differential scanning calorimetry 295
Thermophysical characterization of glassy, cross-linked heterocyclic polymers 417

Specific volume
Pressure–volume–temperature studies of semi-crystalline polymers 397

Temperature
Selected thermodynamic aspects of the influence of pressure on polymer systems 371
Pressure–volume–temperature studies of semi-crystalline polymers 397

TEM
The use of thermal analysis in the study of liquid–liquid phase separation in blends of some crystallizable homopolymers with their branched copolymers 17

Theory
A description of melting and crystallization of eutectic oligomers and copolymers—an application of the physical concepts of colloids 113

Thermodynamics
The crystallization behavior of random copolymers of ethylene 155
Selected thermodynamic aspects of the influence of pressure on polymer systems 371

Three-phase model
The melting of polymers—a three-phase approach 203

Transition
The role of thermal analysis in revealing the common molecular nature of transitions in polymers 41
Mathematical description of differential scanning calorimetry based on periodic temperature modulation 277
Multifrequency calorimetry 309

Volume
Pressure–volume–temperature studies of semi-crystalline polymers 397

XRD
The melting of polymers—a three-phase approach 203
